

Sandy Balls Holiday Park, Godshill, Hampshire.
Meter records reveal losses of £25,000 per year

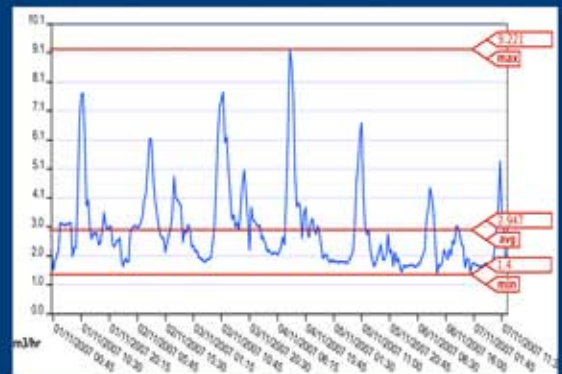

Understanding the 'night line' reading

This meter data shows water loss to be around 3m³/hr which amounts to 27,000m³ of unaccounted water use each year, costing just under £25,000

- ✓ Pipefix investigate and repair leaks, saving £13,000 per year

As Phase 1 of a long term water strategy Pipefix engineers conduct a leak investigation to identify the most significant weaknesses in the system.

Phase 1 repairs reduce the losses to 1.4m³/hr saving 1.6m³/hr. Over a year this will save 12,000m³ of wasted water.

- ✓ The payback period for this phase of work is less than 6 months.
