Water system plans help to reduce running costs

Lack of management information and plans increases costs

- ✗ Limited management information prevents effective site management
- ✗ Extensive and complex water system without effective plans or controls
- ✗ Unable to set up leak investigations and waste management strategies
- ✗ Poor information about valve locations wastes time in emergencies
- ✗ Unknown condition of pipes makes risk planning difficult
- ✗ Limited data about pipe materials makes investment planning difficult
- ✗ No details about pipe diameters makes development of the system difficult

- £ High cost of water being supplied
- £ Suspected that leakage prevalent on sites
- £ Some water wastage aggravating high costs issues

The Solution

- ✓ Full water system survey
- ✓ Pipe work and valve apparatus located, sized and plotted
- ✓ System mapped on CAD
- ✓ Data gathered to identify the likely causes of system problems quickly
- ✓ Devices installed to alter system quickly and effectively in emergencies
- ✓ Those devices allow maintenance on the system without closing it all
- ✓ Reduction in maintenance and repair times
- ✓ Easier planning for the future
- ✓ Tighter management controls enable more focus on operating costs
- ✓ Reduction in site water storage requirements

£ Lower system operating costs = lower water bills
